DARLINGTON V. AMADASYS

NAME OF APPLICANT - TYPE OR PRINT

NOTE: THE SIGNATURE AND DATE ON THIS STATEMENT MUST BE ORIGINAL

(6a)

PERSONAL STATEMENT: DARLINGTON AMADASU, M.D.

Upon graduation topmost in my class from elementary school my parents were unable financially to help me further my education. Through self-help and merit scholarship awards from some sources, I was able to get through high, undergraduate, graduate and medical schools, and obtained B.A., M.S., and M.D. degrees. Currently, at University of Utah School of Medicine, I am working towards obtaining M.P.H. degree in Public Health with a major in Occupational and Environmental Health in May, 1999 as fulfillment of the academic phase of the Preventive (Occupational) Medicine Residency Program, also I have successfully completed ACGME-Accredited PGY-1 in Family Practice.

Very early in my life, I have been exposed to, trained and assisted in Traditional Primary Care Folk-Family Medicine practiced by my mother from whom I drew inspirations and resolved to be one of the best primary care practitioners.

Upon my graduation from medical school, as a prelude to my future specialization in primary care, I did a comprehensive rotating internship at Lagos University Teaching Hospital and thereafter went into General, Family and Industrial Medicine Practices in self, private and public employment positions. In the private employment, I worked for many years as an Industrial Medical Officer at Industrial Clinics located at various industrial and occupational establishments. My early life career path began as a laborer, a classroom teacher, later as a Public Health Sanitation Worker and rapidly graduated to Public Health Inspector. Further, I have worked as a farmworker, a factory worker, domestic worker, office-worker, construction sites worker etc in Africa, America and Europe. I have also offered volunteer services as an Industrial Medical Advisor to various labor organizations, as well as volunteered in various community projects.

My preparation, therefore, for graduate education and training in Preventive and Occupational Medicine is extensive and excellent in that my unusual broad and diverse background and multicompetences acquired through a long interdisciplinary and cross-cultural education and training in Africa, America and Europe, as well as my several years of General, Family, Industrial and Community Medicine practice experience adequately prepared me for education and training, and career in Preventive/Occupational/Environmental Medicine and Public Health.

My reasons for desiring graduate work in the specialty are evidently to facilitate my professional development and career advancement and mobility; to build upon my prior basic knowledge and experience; extend and sharpen my professional skills in order to be able to use educational approaches to empower workers and to forge the partnerships between employers and employees necessary to address health, safety and well beings of the workers at work places; to acquire the interdisciplinary scientific, technological, behavioral, biopsychosocial, team, advocacy, and leadership skills necessary to participate in assessing work site for conditions ranging from biological, physical and chemical agents, modifying work situations, to alleviate workers' problems, matching work to people and people to the right jobs, identify and control occupational diseases and injuries, seek to eliminate and reduce work place hazards, determining safety of products and processes, and maintaining compliance with governmental regulations.

Upon completion of my training program I shall seek employment in the practice of Primary care, Preventive, Occupational, Environmental Medicine, teaching and research for which I qualify in any locations, but will strongly consider the under-served areas.

I believe that to build a "whole" person, a proper balance of work, sleep, and leisure must be maintained, with an optimum food intake. It is the function of medicine to study these needs, and of the Occupational and Environmental Medicine to study and control the factors affecting the health and safety of all human at work places. There is no industrial risk, which cannot, by suitable measures, be prevented or reduced.

I am deeply committed to primary care, preventive medicine and occupational and environmental medicine, as well as Public Health.
